

# RAILROAD BARGE

Pushed by tugboats, railroad barges such as this one once served as an important part of the “lighterage” system, in which thousands of vessels shifted cargo from ships to piers. This model is based on Pennsylvania Railroad Barge #399, which was built in 1942. More information about the restored barge can be found at [pennsy399.org](http://pennsy399.org). For assembly, you will need glue and a utility knife. Score before folding for best results.
